Resuscitation, 23 (1992) 261–263
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 23 (1992)

abdominal compression, coronary perfusion pressure, methoxamine, epinephrine, pump unloading, intracardiac injection, 71
ACTH-(1-24), hemorrhagic shock, blood gases, blood lactate, 113
acute blood loss, clinical death, resuscitation, correction of cardiac rhythm abnormalities, 179
ambulance, cardiac arrest, protocols, 207
amino acids, glucose, cerebrospinal fluid, cardiac arrest, hypoxia 145
anesthesia, mixed venous oxygen saturation, near infrared spectroscopy, oxygen consumption, 45
animal models, stroke, physiologic variables, pathologic variables, 91
asystole, survival prediction, ventricular fibrillation, hospital discharge, 77
auditory evoked potential, somatosensory evoked potential, cardiopulmonary resuscitation, postischemic brain damage, 235

BCLS, resuscitation, scoring system, methods, 21
blood gas analysis, cardiopulmonary resuscitation, pH, cardiopulmonary arrest, 101
blood gases, hemorrhagic shock, ACTH-(1-24), blood lactate, 113
blood lactate, hemorrhagic shock, ACTH-(1-24), blood gases, 113
blood rheology, endotoxin, rabbit, 137
brain, isoflurane, electroencephalogram, cardiac output, hypothermia, cerebral metabolism, 121
brain cortex, post-anoxic recovery, synaptosomes, membrane bound calcium, chlortetracycline, polyphosphoinositides, neuronal activity, 33

cardiac arrest, ambulance, protocols, 207
cardiac arrest, amino acids, glucose, cerebrospinal fluid, hypoxia, 145
cardiac arrest, local cerebral blood flow, global brain ischemia, resuscitation, postischemic hypoperfusion, no-reflow phenomenon, 1
cardiac output, isoflurane, electroencephalogram, hypothermia, cerebral metabolism, brain, 121
cardiopulmonary arrest, cardiopulmonary resuscitation, blood gas analysis, pH, 101
cardiopulmonary cerebral resuscitation (CPCR), cardiopulmonary resuscitation (CPR), cerebral resuscitation, defibrillation, 249
cardiopulmonary resuscitation (CPR), cerebral resuscitation, cardiopulmonary cerebral resuscitation (CPCR), defibrillation, 249
cardiopulmonary resuscitation, blood gas analysis, pH, cardiopulmonary arrest, 101
cardiopulmonary resuscitation, somatosensory evoked potential, auditory evoked potential, postischemic brain damage, 235
cerebral cortex, cerebral ischemia transient, nerve tissue proteins, reperfusion injury, free radicals, 59
cerebral ischemia transient, cerebral cortex, nerve tissue proteins, reperfusion injury, free radicals, 59
cerebral metabolism, isoflurane, electroencephalogram, cardiac output, hypothermia, brain, 121
cerebral resuscitation, cardiopulmonary resuscitation (CPR), cardiopulmonary cerebral resuscitation (CPCR), defibrillation, 249
cerebrospinal fluid, amino acids, glucose, cardiac arrest, hypoxia, 145
chlortetracycline, post-anoxic recovery, brain cortex, synaptosomes, membrane bound calcium, polyphosphoinositides, neuronal activity, 33
clinical death, acute blood loss, resuscitation, correction of cardiac rhythm abnormalities, 179
coronary perfusion pressure, methoxamine, epinephrine, abdominal compression, pump unloading, intracardiac injection, 71
correction of cardiac rhythm abnormalities acute blood loss, clinical death, resuscitation, 179

defibrillation, cardiopulmonary resuscitation (CPR), cerebral resuscitation, cardiopulmonary cerebral resuscitation (CPCR), 249
differences, resuscitation, ethics, Europe, USA, 85

electroencephalogram, isoflurane, cardiac output, hypothermia, cerebral metabolism, brain, 121
endotoxin, blood rheology, rabbit, 137
epinephrine, coronary perfusion pressure, methoxamine, abdominal compression, pump unloading, intracardiac injection, 71
ethics, resuscitation, differences, Europe, USA, 85
Europe, resuscitation, ethics, differences, USA, 85

flow microspheres, hemorrhagic shock, 217
free radicals, cerebral ischemia transient, cerebral cortex, nerve tissue proteins, reperfusion injury, 59

global brain ischemia, local cerebral blood flow, cardiac arrest, resuscitation, postischemic hypoperfusion, no-reflow phenomenon, 1
glucose, amino acids, cerebrospinal fluid, cardiac arrest, hypoxia, 145

head injury, resuscitation, prognosis, outcome, 199
hemorrhage, shock index, hyperdynamic sepsis, left ventricular stroke work, oxgen transport, 227
hemorrhagic shock, ACTH-(1-24), blood gases, blood lactate, 113
hemorrhagic shock, microspheres, flow, 217
hospital discharge, survival prediction, ventricular fibrillation, asystole, 77
hyperdynamic sepsis, shock index, hemorrhage, left ventricular stroke work, oxgen transport, 227
hypothermia, isoflurane, electroencephalogram, cardiac output, cerebral metabolism, brain, 121
hypoxia amino acids, glucose, cerebrospinal fluid, cardiac arrest, 145

intracardiac injection, coronary perfusion pressure, methoxamine, epinephrine, abdominal compression, pump unloading, 71
isoflurane, electroencephalogram, cardiac output, hypothermia, cerebral metabolism, brain, 121

left ventricular stroke work, shock index, hemorrhage, hyperdynamic sepsis, oxgen transport, 227
local cerebral blood flow, cardiac arrest, global brain ischemia, resuscitation, postischemic hypoperfusion, no-reflow phenomenon, 1

membrane bound calcium, post-anoxic recovery, brain cortex, synaptosomes, chlortetracycline, polyphosphoinositides, neuronal activity, 33
methods, resuscitation, BCLS, scoring system, 21
methods of deployment, out-of-hospital cardiac arrest, paramedics, survival, 193
methoxamine, coronary perfusion pressure, epinephrine, abdominal compression, pump unloading, intracardiac injection, 71
microspheres, hemorrhagic shock, flow, 217
mixed venous oxygen saturation, anesthesia, near infrared spectroscopy, oxygen consumption, 45

near infrared spectroscopy, anesthesia, mixed venous oxygen saturation, oxygen consumption, 45
nerve tissue proteins, cerebral ischemia transient, cerebral cortex, reperfusion injury, free radicals, 59
neuronal activity, post-anoxic recovery, brain cortex, synaptosomes, membrane bound calcium, chlortetracycline, polyphosphoinositides, 33
no-reflow phenomenon, local cerebral blood flow, cardiac arrest, global brain ischemia, resuscitation, postischemic hypoperfusion, 1

out-of-hospital cardiac arrest, paramedics, methods of deployment, survival, 193
outcome head injury, resuscitation, prognosis, 199
oxgen transport shock index, hemorrhage, hyperdynamic sepsis, left ventricular stroke work, 227
oxygen consumption, anesthesia, mixed venous oxygen saturation, near infrared spectroscopy, 45

paramedics, out-of-hospital cardiac arrest, methods of deployment, survival, 193
pathologic variables, stroke, animal models, physiologic variables, 91
pH, cardiopulmonary resuscitation, blood gas analysis, cardiopulmonary arrest, 101
physiologic variables, stroke, animal models, pathologic variables, 91
polyphosphoinositides, post-anoxic recovery, brain cortex, synaptosomes, membrane bound calcium, chlortetracycline, neuronal activity, 33
post-anoxic recovery, brain cortex, synaptosomes, membrane bound calcium, chlortetracycline, polyphosphoinositides, neuronal activity, 33

postischemic brain damage somatosensory evoked potential, auditory evoked potential, cardiopulmonary resuscitation, 235
postischemic hypoperfusion, local cerebral blood flow, cardiac arrest, global brain ischemia, resuscitation, no-reflow phenomenon, 1
prognosis, head injury, resuscitation, outcome, 199
protocols, ambulance, cardiac arrest, 207
pump unloading, coronary perfusion pressure, methoxamine, epinephrine, abdominal compression, intracardiac injection, 71

rabbit, blood rheology, endotoxin, 137
reperfusion injury, cerebral ischemia transient, cerebral cortex, nerve tissue proteins, free radicals, 59
resuscitation, acute blood loss, clinical death, correction of cardiac rhythm abnormalities, 179
resuscitation, BCLS, scoring system, methods, 21
resuscitation, ethics, differences, Europe, USA, 85
resuscitation, head injury, prognosis, outcome, 199
resuscitation, local cerebral blood flow, cardiac arrest, global brain ischemia, postischemic hypoperfusion, no-reflow phenomenon, 1

scoring system, resuscitation, BCLS, methods, 21
shock index, hemorrhage, hyperdynamic sepsis, left ventricular stroke work, oxgen transport, 227
somatosensory evoked potential, auditory evoked potential, cardiopulmonary resuscitation, postischemic brain damage, 235
stroke, animal models, physiologic variables, pathologic variables, 91
survival out-of-hospital cardiac arrest, paramedics, methods of deployment, 193
survival prediction, ventricular fibrillation, asystole, hospital discharge, 77
synaptosomes, post-anoxic recovery, brain cortex, membrane bound calcium, chlortetracycline, polyphosphoinositides, neuronal activity, 33

USA, resuscitation, ethics, differences, Europe, 85

ventricular fibrillation, survival prediction, asystole, hospital discharge, 77
